

SofortLib

SofortLib-PHP-Payment-2.1.1

18.07.2014 06:36:23

Chapter 1

Main Page

Base class for SOFORT XML-API

This class implements basic http authentication and an xml-parser for parsing response messages

Requires libcurl and openssl

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Chapter 2

Class Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

AbstractDataHandler	10
XmlDataHandler	69
AbstractLoggerHandler	15
FileLogger	19
ArrayToXml	16
ArrayToXmlException	18
SofortElement	23
SofortTag	61
SofortText	63
SofortLibFactory	24
SofortLibHttp	26
SofortLibHttpCurl	31
SofortLibHttpSocket	34
SofortLibMultipay	37
Sofortueberweisung	66
SofortLibNotification	44
SofortLibTransactionData	45
XmlToArray	71
XmlToArrayException	73
XmlToArrayNode	74

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

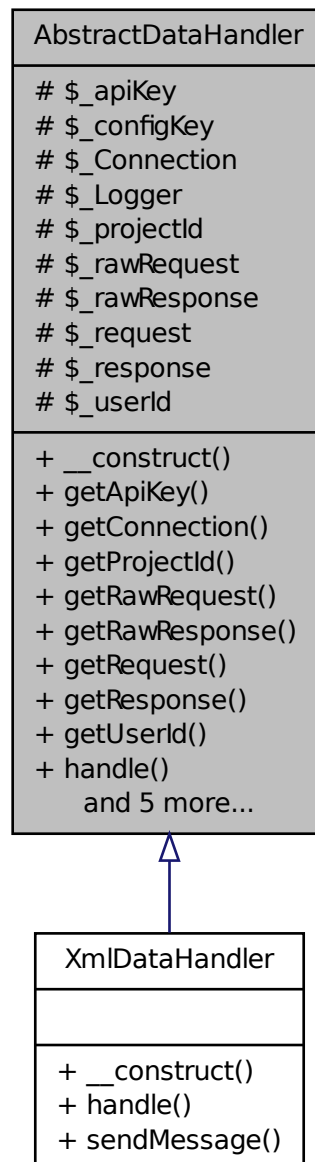

AbstractDataHandler	10
AbstractLoggerHandler	15
ArrayToXml	16
ArrayToXmlException	18
FileLogger	19
SofortElement	23
SofortLibFactory	24
SofortLibHttp	26
SofortLibHttpCurl	31
SofortLibHttpSocket	34
SofortLibMultipay	37
SofortLibNotification	44
SofortLibTransactionData	45
SofortTag	61
SofortText	63
Sofortueberweisung	66
XmlDataHandler	69
XmlToArray	71
XmlToArrayException	73
XmlToArrayNode	74

Chapter 4

Class Documentation

4.1 AbstractDataHandler Class Reference

Inheritance diagram for AbstractDataHandler:

Public Member Functions

- [__construct](#) (\$configKey)
- [getApiKey](#) ()
- [getConnection](#) ()
- [getProjectId](#) ()
- [getRawRequest](#) ()
- [getRawResponse](#) ()
- [getRequest](#) ()
- [getResponse](#) ()
- [getUserId](#) ()
- [setApiKey](#) (\$apiKey)
- [setConfigKey](#) (\$configKey)
- [setConnection](#) (\$Connection)
- [setProjectId](#) (\$projectId)
- [setUserId](#) (\$userId)

4.1.1 Detailed Description

Abstract Data Handler

Handles the SofortLibs data-input and output. For the moment we only offer an XML-Handler, others (i.e. JSON) are possible too.

Author

SofortLib 2.1.1

[official website](#)

4.1.2 Constructor & Destructor Documentation

4.1.2.1 [__construct](#) (\$ configKey)

Constructor for [AbstractDataHandler](#)

Parameters

string	<i>\$configKey</i>	
--------	--------------------	--

Returns

Reimplemented in [XmlDataHandler](#).

4.1.3 Member Function Documentation**4.1.3.1 getApiKey ()**

Getter for the ApiKey

Returns

string

4.1.3.2 getConnection ()

Returns the connection, normally a http instance

Returns

Connection Object

4.1.3.3 getProjectId ()

Getter for the ProjectId

Returns

string

4.1.3.4 getRawRequest ()

Getter for the raw Request Data

Returns

string

4.1.3.5 getRawResponse ()

Getter for the raw Response Data

Returns

string

4.1.3.6 getRequest ()

Getter for the Request

Returns

mixed

4.1.3.7 getResponse ()

Getter for the Response

Returns

mixed

4.1.3.8 getUserId ()

Getter for the userId

Returns

string

4.1.3.9 setApiKey (\$apiKey)

Setter for the ApiKey

Parameters

string	<i>\$apiKey</i>	
--------	-----------------	--

Returns

[AbstractDataHandler](#) \$this

4.1.3.10 setConfigKey (\$ configKey)

Setting the configKey and extracting userId, projectId and apiKey from configKey

Parameters

string	<i>\$configKey</i>	
--------	--------------------	--

Returns

[AbstractDataHandler](#) \$this

4.1.3.11 setConnection (\$ Connection)

Setting the connection (standard: http instance) and the configkey

Parameters

string	<i>\$Connection</i>	
--------	---------------------	--

Returns

[AbstractDataHandler](#) \$this

4.1.3.12 setProjectId (\$ projectId)

Setter for the projectId

Parameters

string	<i>\$projectId</i>	
--------	--------------------	--

Returns

[AbstractDataHandler](#) \$this

4.1.3.13 setUserId (\$ userId)

Setter for the userId

Parameters

string	<i>\$userId</i>	
--------	-----------------	--

Returns

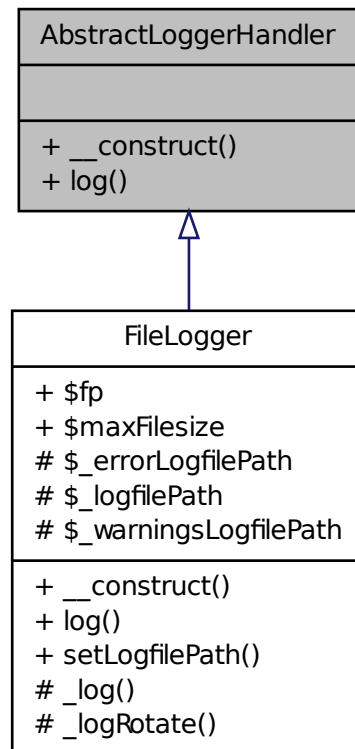

[AbstractDataHandler](#) \$this

The documentation for this class was generated from the following file:

- abstractDataHandler.php

4.2 AbstractLoggerHandler Class Reference

Inheritance diagram for AbstractLoggerHandler:

4.2.1 Detailed Description

Abstract Logger Handler

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.3.2 Constructor & Destructor Documentation

4.3.2.1 `__construct (array $ input, $ maxDepth = 10, $ trim = true)`

Loads array into XML representation.

Parameters

array	<i>\$input</i>	
int	<i>\$maxDepth</i>	(default 10)
bool	<i>\$trim</i>	(default true)

Exceptions

<i>ArrayToXml-Exception</i>	
---	--

Returns

4.3.3 Member Function Documentation

4.3.3.1 `static render (array $ input, array $ options = array()) [static]`

Static entry point. Options are:

- version: (default 1.0) version string to put in xml prolog
- encoding: (default UTF-8) use the specified encoding
- trim: (default true) Trim values
- depth: (default 10) Maximum depth to parse the given array, throws exception when exceeded

Parameters

array	<i>\$input</i>	the input array
array	<i>\$options</i>	set additional options to pass to XmlToArray

Exceptions

<i>ArrayToXml-Exception</i>	
---	--

Returns

string

4.3.3.2 toXml (\$version = '1.0', \$encoding = 'UTF-8')

Returns parsed array as XML structure Pass both params as null to exclude prologue
<?xml version="version" encoding="encoding" ?>

Parameters

string	<i>\$version</i>	(default 1.0)
string	<i>\$encoding</i>	(default UTF-8)

Returns

string

The documentation for this class was generated from the following file:

- arrayToXml.php

4.4 ArrayToXmlException Class Reference

4.4.1 Detailed Description

Array To XML Exception

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

The documentation for this class was generated from the following file:

- `arrayToXmlException.php`

4.5 FileLogger Class Reference

Inheritance diagram for FileLogger:

Public Member Functions

- `__construct` (\$path= "")

- [log](#) (\$message, \$log= 'log')
- [setLogfilePath](#) (\$path)

Public Attributes

- [\\$fp](#) = null
- [\\$maxFileSize](#) = 1048576

Protected Member Functions

- [_log](#) (\$message, \$log= 'log')
- [_logRotate](#) ()

Protected Attributes

- [\\$_errorLogfilePath](#) = false
- [\\$_logfilePath](#) = false
- [\\$_warningsLogfilePath](#) = false

4.5.1 Detailed Description

File logger

A basic implementation of logging mechanism intended for debugging

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.5.2 Constructor & Destructor Documentation

4.5.2.1 `__construct ($ path = ' ')`

Constructor Setting the LogfilePaths

Parameters

string	<i>\$path</i>	
--------	---------------	--

4.5.3 Member Function Documentation

4.5.3.1 `_log ($ message, $ log = ' log')` [protected]

Logs \$msg to a file which path is being set by it's unified resource locator

Parameters

string	<i>\$message</i>	
string	<i>\$log</i>	(default = 'log')

Returns

bool

4.5.3.2 `_logRotate ()` [protected]

Copy the content of the logfile to a backup file if file size got too large Put the old log file into a tarball for later reference

Returns

bool

4.5.3.3 `log ($ message, $ log = ' log')`

Setting a log entry

Parameters

string	<i>\$message</i>	
string	<i>\$log</i>	(default = 'log')

Returns

bool

Reimplemented from [AbstractLoggerHandler](#).

4.5.3.4 setLogfilePath (\$path)

Set the path of the logfile

Parameters

string	<i>\$path</i>	
--------	---------------	--

Returns

void

4.5.4 Member Data Documentation**4.5.4.1 string \$_errorLogfilePath = false** [protected]

Path to errors logfile

4.5.4.2 string \$_logfilepath = false [protected]

Path to Logfile

4.5.4.3 string \$_warningsLogfilePath = false [protected]

Path to warnings logfile

4.5.4.4 resource \$fp = null

File Handler

4.5.4.5 int \$maxFilesize = 1048576

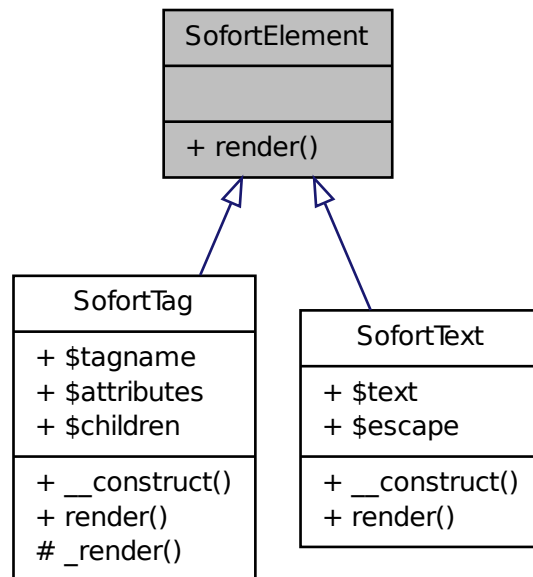

Maximum size of a log file in Bytes

The documentation for this class was generated from the following file:

- fileLogger.php

4.6 SofortElement Class Reference

Inheritance diagram for SofortElement:

Public Member Functions

- [render \(\)](#)

4.6.1 Detailed Description

Sofort Element

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#) [Implementation of a simple element](#)

4.6.2 Member Function Documentation

4.6.2.1 `render ()` [abstract]

Render the element

Reimplemented in [SofortTag](#), and [SofortText](#).

The documentation for this class was generated from the following file:

- `sofortElement.php`

4.7 SofortLibFactory Class Reference

Static Public Member Functions

- static [getDataHandler](#) (\$configKey)
- static [getHttpConnection](#) (\$data, \$url=false, \$headers=false)
- static [getLogger](#) ()

4.7.1 Detailed Description

Sofort Library Factory

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.7.2 Member Function Documentation

4.7.2.1 static `getDataHandler ($ configKey)` [static]

Defines and includes the DataHandler

Parameters

string	<i>\$configKey</i>	
--------	--------------------	--

Returns

[XmlDataHandler](#)

4.7.2.2 static `getHttpConnection ($ data, $ url = false, $ headers = false)` [static]

Defines the Http Connection to be used

Parameters

string	<i>\$data</i>	
string bool	<i>\$url</i>	
array bool	<i>\$headers</i>	

Returns

SofortLibHttpCurl|SofortLibHttpSocket

4.7.2.3 static `getLogger ()` [static]

Defines and includes the logger

Returns

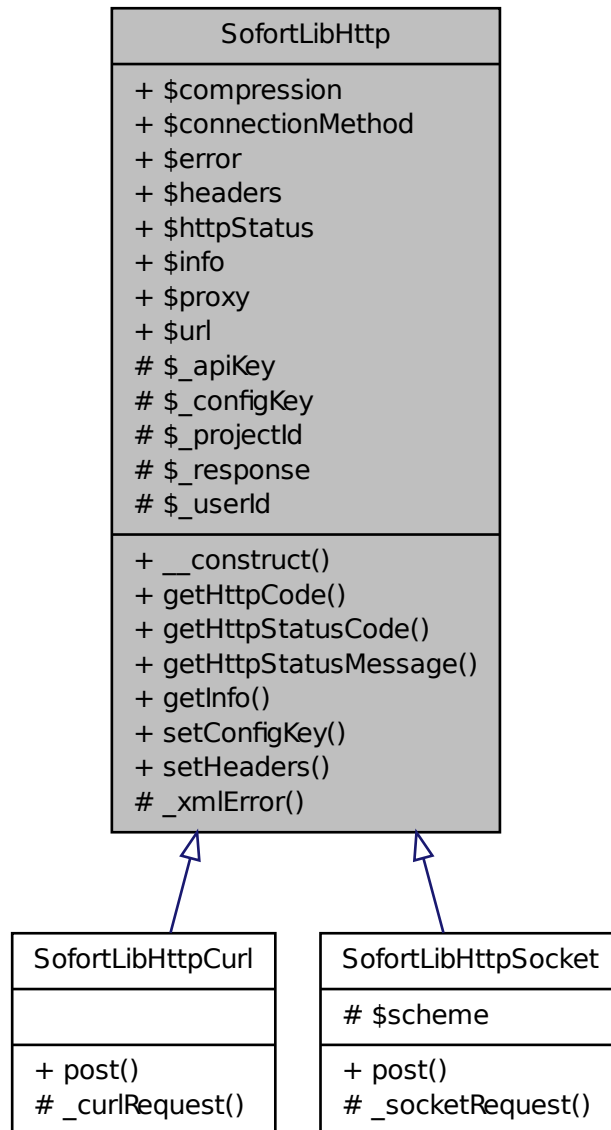

[FileLogger](#)

The documentation for this class was generated from the following file:

- `sofortLibFactory.php`

4.8 SofortLibHttp Class Reference

Inheritance diagram for SofortLibHttp:

Public Member Functions

- [__construct](#) (\$url, \$compression=false, \$proxy= '')
- [getHttpCode](#) ()
- [getHttpStatusCode](#) ()
- [getHttpStatusMessage](#) ()
- [getInfo](#) (\$opt= '')
- [setConfigKey](#) (\$configKey)
- [setHeaders](#) ()

Protected Member Functions

- [_xmlError](#) (\$code, \$message)

4.8.1 Detailed Description

Encapsulates communication via HTTP

requires libcurl and openssl

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.8.2 Constructor & Destructor Documentation

4.8.2.1 `__construct ($ url, $ compression = false, $ proxy = ' ')`

Constructor for [SofortLibHttp](#)

Parameters

string	<i>\$url</i>	
bool	<i>\$compression</i>	(default false)
string	<i>\$proxy</i>	(optional)

Returns

4.8.3 Member Function Documentation

4.8.3.1 `_xmlError ($code, $message)` [protected]

Output an xml error

Parameters

string	<i>\$code</i>	
string	<i>\$message</i>	

Returns

string xml error

4.8.3.2 `getHttpCode ()`

HTTP error handling

Returns

array(code, message, response[if available])

4.8.3.3 `getHttpStatusCode ()`

Getter for HTTP status code

Returns

string

4.8.3.4 `getHttpStatusMessage ()`

Getter for HTTP status message

Returns

string

4.8.3.5 getInfo (\$opt = ' ')

Getter for information

Parameters

string	<i>\$opt</i>	(optional)
--------	--------------	------------

Returns

string

4.8.3.6 setConfigKey (\$configKey)

Setter for ConfigKey and parsing ConfigKey into userId, ProjectId, apiKey

Parameters

string	<i>\$configKey</i>	
--------	--------------------	--

Returns

void

4.8.3.7 setHeaders ()

Setting Headers to be sent

Returns

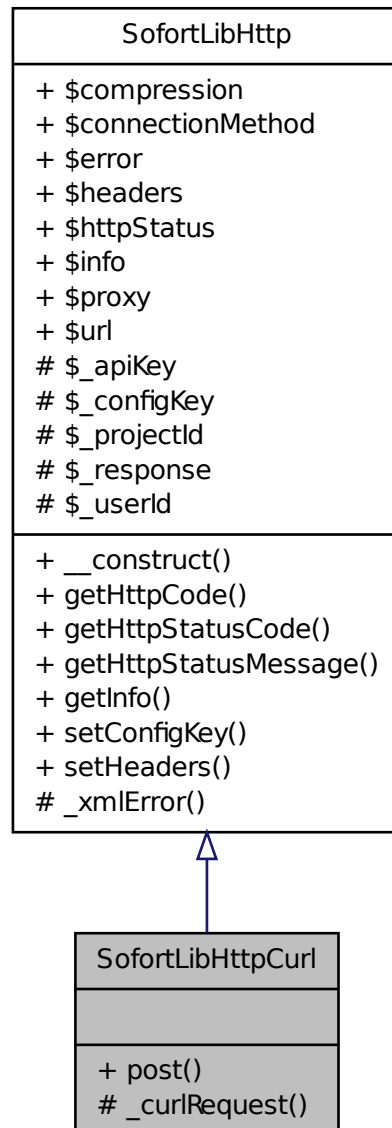

void

The documentation for this class was generated from the following file:

- sofortLibHttp.inc.php

4.9 SofortLibHttpClient Class Reference

Inheritance diagram for SofortLibHttpClient:

Public Member Functions

- [post](#) (\$data, \$url=false, \$headers=false)

Protected Member Functions

- [_curlRequest](#) (\$url, \$curlOpt=array())

4.9.1 Detailed Description

this class handles requests using the curl method

Author

SOFORT AG (integration@sofort.com)

Copyright

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.9.2 Member Function Documentation

4.9.2.1 [_curlRequest](#) (*\$url*, *\$curlOpt*=array()) [protected]

Post data using curl

Parameters

string	<i>\$url</i>	
array	<i>\$curlOpt</i>	(optional)

Returns

string

4.9.2.2 `post ($ data, $ url = false, $ headers = false)`

Send data to server with POST request

Parameters

string	<i>\$data</i>	
string bool	<i>\$url</i>	(optional)
string bool	<i>\$headers</i>	(optional)

Returns

string

The documentation for this class was generated from the following file:

- `sofortLibHttpCurl.inc.php`

4.10 SofortLibHttpSocket Class Reference

Inheritance diagram for SofortLibHttpSocket:

Public Member Functions

- [post](#) (\$data, \$url=null, \$headers=null)

Protected Member Functions

- [_socketRequest](#) (\$uri, \$out)

4.10.1 Detailed Description

this class handles requests using the socket method

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.10.2 Member Function Documentation

4.10.2.1 [_socketRequest](#) (*\$uri*, *\$out*) [protected]

This is a fallback with fsockopen if curl is not activated we still need openssl and ssl wrapper support (PHP >= 4.3.0)

Parameters

string	<i>\$uri</i>	
string	<i>\$out</i>	

Returns

string

4.10.2.2 `post ($data, $url = null, $headers = null)`

Send data to server with POST request

Parameters

	<i>\$data</i>	
string	<i>\$url</i>	
bool	<i>\$headers</i>	

Returns

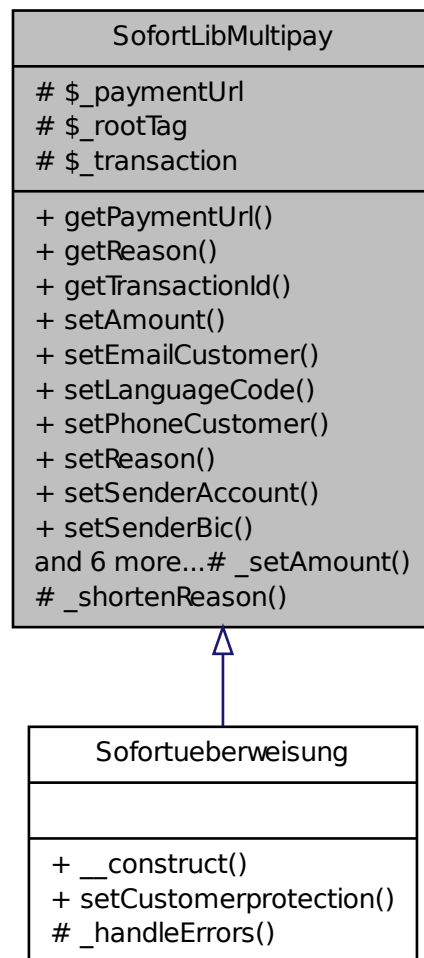

string

The documentation for this class was generated from the following file:

- `sofortLibHttpSocket.inc.php`

4.11 SofortLibMultipay Class Reference

Inheritance diagram for SofortLibMultipay:

Public Member Functions

- [getPaymentUrl \(\)](#)
- [getReason \(\)](#)
- [getTransactionId \(\)](#)
- [setAmount \(\\$amount=0.00\)](#)

- [setEmailCustomer](#) (\$customersEmail)
- [setLanguageCode](#) (\$languageCode)
- [setPhoneCustomer](#) (\$customersPhone)
- [setReason](#) (\$reason1, \$reason2= '')
- [setSenderAccount](#) (\$bankCode, \$accountNumber, \$holder)
- [setSenderBic](#) (\$bic)
- [setSenderCountryCode](#) (\$countryCode)
- [setSenderHolder](#) (\$holder)
- [setSenderIban](#) (\$iban)
- [setSenderSepaAccount](#) (\$bic, \$iban, \$holder)
- [setTimeout](#) (\$timeout)
- [setUserVariable](#) (\$userVariable)
- [setVersion](#) (\$version)

Protected Member Functions

- [_setAmount](#) (\$amount=0.00)
- [_shortenReason](#) (\$reason, \$pattern= '#[^\a-zA-Z0-9+-\.\,]#', \$reasonLength=27)

4.11.1 Detailed Description

Abstract Multipay Class

provides attributes and methods for Invoice and SofortUeberweisung

Author

SOFORT AG (integration@sofort.com)

Copyright

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.11.2 Member Function Documentation

4.11.2.1 [_setAmount](#) (\$ amount = 0.00) [protected]

Setter for Amount

Parameters

float	<i>\$amount</i>	
-------	-----------------	--

Returns

[SofortLibMultipay](#) \$this

4.11.2.2 `_shortenReason ($reason, $pattern = '# [^a-zA-Z0-9+-\.,]#', $reasonLength = 27)` [protected]

Shortens the reason string

Parameters

string	<i>\$reason</i>	
string	<i>\$pattern</i>	
int	<i>\$reasonLength</i>	

Returns

string

4.11.2.3 `getPaymentUrl ()`

After configuration and sending this request you can use this function to redirect the customer to the payment form

Returns

string url of payment form

4.11.2.4 `getReason ()`

Getter for reasons

Returns

string

4.11.2.5 `getTransactionId ()`

After configuration and sending this request you can use this function to get the transactions transaction ID

Returns

string

4.11.2.6 setAmount (\$ amount = 0.00)

Setter for Amount

Parameters

float	<i>\$amount</i>	
-------	-----------------	--

Returns

[SofortLibMultipay](#) \$this

4.11.2.7 setEmailCustomer (\$ customersEmail)

Set the email address of the customer this will be used for sofortvorkasse and so-fortrechnung

Parameters

string	<i>\$customers- Email</i>	email address
--------	-------------------------------	---------------

Returns

[SofortLibMultipay](#) \$this

4.11.2.8 setLanguageCode (\$ languageCode)

Setter for languageCode

Parameters

string	<i>\$language- Code</i>	fallback EN
--------	-----------------------------	-------------

Returns

[SofortLibMultipay](#) \$this

4.11.2.9 setPhoneCustomer (\$ customersPhone)

Set the phone number of the customer

Parameters

string	<i>\$customers-Phone</i>	phone number
--------	--------------------------	--------------

Returns

[SofortLibMultipay](#) \$this

4.11.2.10 setReason (\$ reason1, \$ reason2 = ' ')

Setter for Reasons

Parameters

string	<i>\$reason1</i>	
string	<i>\$reason2</i>	(optional)

Returns

SofortLibAbstract \$this

4.11.2.11 setSenderAccount (\$ bankCode, \$ accountNumber, \$ holder)

Set data of account

Parameters

string	<i>\$bankCode</i>	bank code of bank
string	<i>\$account-Number</i>	account number
string	<i>\$holder</i>	Name/Holder of this account

Returns

[SofortLibMultipay](#) \$this

4.11.2.12 setSenderBic (\$ bic)

Setter for senders BIC

Parameters

string	<i>\$bic</i>	
--------	--------------	--

Returns

[SofortLibMultipay](#) \$this

4.11.2.13 setSenderCountryCode (\$ countryCode)

Setter for senders country code (ISO 3166-1)

Parameters

string	<i>\$country-Code</i>	
--------	-----------------------	--

Returns

[SofortLibMultipay](#) \$this

4.11.2.14 setSenderHolder (\$ holder)

Setter for senders holder (ISO 3166-1)

Parameters

string	<i>\$holder</i>	
--------	-----------------	--

Returns

[SofortLibMultipay](#) \$this

4.11.2.15 setSenderIban (\$ iban)

Setter for senders iban

Parameters

string	<i>\$iban</i>	
--------	---------------	--

Returns

[SofortLibMultipay](#) \$this

4.11.2.16 setSenderSepaAccount (\$ bic, \$ iban, \$ holder)

Set data of account, SEPA conform (iban & bic)

Parameters

string	<i>\$bic</i>	bic of bank
string	<i>\$iban</i>	iban of account
string	<i>\$holder</i>	Name/Holder of this account

Returns

[SofortLibMultipay](#) \$this

4.11.2.17 setTimeout (\$ timeout)

Timeout how long this transaction configuration will be valid for this is the time between the generation of the payment url and the user completing the form, should be at least two to three minutes defaults to unlimited if not set

Parameters

int	<i>\$timeout</i>	timeout in seconds
-----	------------------	--------------------

Returns

[SofortLibMultipay](#) \$this

4.11.2.18 setUserVariable (\$ userVariable)

Add another variable this can be your internal order id or multiple variables

Parameters

string array	<i>\$user- Variable</i>	the contents of the variable
-------------------	-----------------------------	------------------------------

Returns

[SofortLibMultipay](#) \$this

4.11.2.19 setVersion (\$ version)

Set the version of this payment module this is helpful so the support staff can easily find out if someone uses an outdated module

Parameters

string	<i>\$version</i>	version string of your module
--------	------------------	-------------------------------

Returns

[SofortLibMultipay](#) \$this

The documentation for this class was generated from the following file:

- [sofortLibMultipay.inc.php](#)

4.12 SofortLibNotification Class Reference

Public Member Functions

- [getNotification](#) (\$content)
- [getTime](#) ()
- [getTransactionId](#) ()

4.12.1 Detailed Description

This class handles incoming notifications for sofortueberweisung and invoice

Author

SOFORT AG (integration@sofort.com)

2010-2014 SOFORT AG

Released under the GNU LESSER GENERAL PUBLIC LICENSE (Version 3) <http://www.gnu.org/licenses/lgpl.html>

Version

SofortLib 2.1.1

[official website](#)

4.12.2 Member Function Documentation

4.12.2.1 [getNotification](#) (*\$ content*)

Reads the input and tries to read the transaction id

Parameters

string	<i>\$content</i>	XML-File Content
--------	------------------	------------------

Returns

bool|string (transaction ID, when true)

4.12.2.2 getTime ()

Getter for variable time

Returns

string

4.12.2.3 getTransactionId ()

Getter for transaction

Returns

string

The documentation for this class was generated from the following file:

- `sofortLibNotification.inc.php`

4.13 SofortLibTransactionData Class Reference

Inherits SofortLibAbstract.

4.13.1 Detailed Description

This class is for retrieving information about transactions, you can search by transaction-id or by date

```
eg: $SofortLibTransactionData = new SofortLibTransactionData('yourapikey');
$SofortLibTransactionData->setTransaction('1234-456-789654-31321')->sendRequest();
echo $SofortLibTransactionData->getStatus();
```

[official website](#)

4.13.2 Member Function Documentation**4.13.2.1 `_parse ()` [protected]**

Parse the XML (override)

See also

SofortLibAbstract::_parse()

Returns

void

4.13.2.2 `addTransaction ($transaction)`

Use this function if you want to request detailed information about several transactions at once

Parameters

string	<i>\$transaction</i>	
--------	----------------------	--

Returns

[SofortLibTransactionData](#) \$this

4.13.2.3 `getAmount ($i = 0)`

Returns the total amount of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

double amount

4.13.2.4 getAmountRefunded (\$i = 0)

Refund, if a transaction was refunded. amount = amountRefunded if everything was refunded

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

double amount

4.13.2.5 getBillcode (\$i = 0)

Returns the transactions billcode

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string billcode

4.13.2.6 getConsumerProtection (\$i = 0)

Returns the state of consumer_protection if set

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

bool

4.13.2.7 getCostsCurrencyCode (\$i = 0)

Returns the transactions costs Currency

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string EUR|USD|GBP... >

4.13.2.8 getCostsExchangeRate (\$i = 0)

Returns the transactions exchange rate

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

double exchange_rate

4.13.2.9 getCostsFees (\$i = 0)

Returns the transactions Fees (Part of Costs)

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

double fees

4.13.2.10 getCount ()

Getter for count, the number of transaction returned by the response

Returns

int

4.13.2.11 `getCurrency ($i = 0)`

Returns the currency of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string EUR|USD|GBP....

4.13.2.12 `getEmailCustomer ($i = 0)`

Returns the transaction customer's email-address

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string email-address

4.13.2.13 `getExchangeRate ($i = 0)`

Returns the transactions exchange rate

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string exchange rate

4.13.2.14 `getLanguageCode ($i = 0)`

Returns the language code of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string language code

4.13.2.15 getPaycode (*\$i* = 0)

Returns the transactions paycode

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string paycode

4.13.2.16 getPaymentMethod (*\$i* = 0)

Returns the payment method of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string su|paycode|billcode

4.13.2.17 getPhoneNumberCustomer (*\$i* = 0)

Returns the transaction customer phone-number

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string phone-number

4.13.2.18 getProjectId (\$i = 0)

Returns the project id of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

int project id

4.13.2.19 getReason (\$i = 0, \$n = 0)

Returns an array containing reason of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
int	<i>\$n</i>	get the reason line (0 = line 1, 1 = line 2; default 0)

Returns

string transaction reasons

4.13.2.20 getRecipientAccountNumber (\$i = 0)

Returns the account number of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string account number

4.13.2.21 getRecipientBankCode (\$i = 0)

Returns the bank code of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string recipient bank code

4.13.2.22 getRecipientBankName (\$i = 0)

Returns the bank name of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string bank name

4.13.2.23 getRecipientBic (\$i = 0)

Returns the BIC of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string recipient BIC

4.13.2.24 getRecipientCountryCode (\$i = 0)

Returns the country code of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string country code

4.13.2.25 getRecipientHolder (\$i = 0)

Returns the holder of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string recipient holder

4.13.2.26 getRecipientIban (\$i = 0)

Returns the IBAN of the receiving account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string recipient IBAN

4.13.2.27 getSenderAccountNumber (\$i = 0)

Returns the account number of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender account number

4.13.2.28 getSenderBankCode (\$i = 0)

Returns the bank code of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender bank code

4.13.2.29 `getSenderBankName ($i = 0)`

Returns the bank name of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender bank name

4.13.2.30 `getSenderBic ($i = 0)`

Returns the BIC of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender BIC

4.13.2.31 `getSenderCountryCode ($i = 0)`

Returns the country code of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender country code

4.13.2.32 getSenderHolder (\$i = 0)

Returns the holder of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender holder

4.13.2.33 getSenderIban (\$i = 0)

Returns the IBAN of the sending account

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string sender IBAN

4.13.2.34 getStatus (\$i = 0)

Returns the status of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string status of transaction

4.13.2.35 getStatusHistoryItem (\$i = 0, \$n = 0)

Returns an array with an status_history_item (status (code), status_reason and time)

Parameters

int	$\$i$	if you request multiple transactions at once you can set the number here (default 0)
int	$\$n$	if there are multiple status_history_items set the number (default 0)

Returns

mixed|bool

4.13.2.36 getStatusModifiedTime ($\$i = 0$)

Returns the time of the last status-change so you can check if sth. changed

Parameters

int	$\$i$	if you request multiple transactions at once you can set the number here (default 0)
-----	-------	--

Returns

string time e.g. 2011-01-01T12:35:09+01:00 use strtotime() to convert it to unix-time

4.13.2.37 getStatusReason ($\$i = 0$)

Returns the detailed status description of a transaction

Parameters

int	$\$i$	if you request multiple transactions at once you can set the number here (default 0)
-----	-------	--

Returns

string message

4.13.2.38 getTime ($\$i = 0$)

Returns the time of a transaction

Parameters

int	$\$i$	if you request multiple transactions at once you can set the number here (default 0)
-----	-------	--

Returns

string time e.g. 2011-01-01T12:35:09+01:00 use strtotime() to convert it to unix-time

4.13.2.39 getTransaction (\$i = 0)

Returns the transaction id of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

string transaction id

4.13.2.40 getUserVariable (\$i = 0, \$n = 0)

Returns the user variable of a transaction

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
int	<i>\$n</i>	number of the variable (default 0)

Returns

string the content of this variable

4.13.2.41 isTest (\$i = 0)

Checks if the transaction was a test

Parameters

int	<i>\$i</i>	if you request multiple transactions at once you can set the number here (default 0)
-----	------------	--

Returns

bool

4.13.2.42 `setCount ($count)`

Setter for transaction-counter

Parameters

int	<i>\$count</i>	
-----	----------------	--

Returns

SofortTransactionData \$this

4.13.2.43 `setNumber ($number, $page = 1)`

You can limit the number of results

Parameters

int	<i>\$number</i>	number of results [0-100]
int	<i>\$page</i>	result page (default 1)

Returns

[SofortLibTransactionData](#) \$this

See also

[setTime\(\)](#)

4.13.2.44 `setStatus ($status)`

Request for transactions with certain status

Parameters

string	<i>\$status</i>	(loss pending received refunded untraceable)
--------	-----------------	--

Returns

SofortTransactionData

4.13.2.45 `setStatusModifiedTime ($from, $to)`

Request for transactions with their status changed within a certain time

Parameters

string	<i>\$from</i>	possible formats: 2011-01-25 or 2011-01-25T19:01:02+02:00
string	<i>\$to</i>	possible formats: 2011-01-25 or 2011-01-25T19:01:02+02:00

Returns

SofortTransactionData

4.13.2.46 setStatusReason (*\$statusReason*)

Request for transactions with certain status reason

Parameters

string	<i>\$status-Reason</i>	(not_credited_yet not_credited refunded compensation credited canceled confirm_invoice confirmation-_period_expired wait_for_money partially_credited overpayment rejected sofort_bank_account_needed prefinanced acquired late_succeed)
--------	------------------------	--

Returns

SofortTransactionData

4.13.2.47 setTime (*\$from*, *\$to*)

You can request all transactions of a certain time period

use [setNumber\(\)](#) to limit the results

Parameters

string	<i>\$from</i>	date possible formats: 2011-01-25 or 2011-01-25T19:01:02+02:00
string	<i>\$to</i>	date possible formats: 2011-01-25 or 2011-01-25T19:01:02+02:00

Returns

[SofortLibTransactionData](#) \$this

4.18.2 Constructor & Destructor Documentation**4.18.2.1 `__construct ($input, $maxDepth = 20)`**

Loads XML into array representation.

Parameters

string	<i>\$input</i>	
int	<i>\$maxDepth</i>	(default 20)

Exceptions

<i>XmlToArray-Exception</i>	
---	--

Returns**4.18.3 Member Function Documentation****4.18.3.1 `log ($msg, $type = 2)`**

Log messages (debugging purpose)

Parameters

string	<i>\$msg</i>	
int	<i>\$type</i>	(default 2)

Returns

array|bool

4.18.3.2 `static render ($ input, $ simpleStructure = false, $ maxDepth = 20)`
[static]

Static entry point

Parameters

string	<i>\$input</i>	
bool	<i>\$simple-Structure</i>	(default false)
int	<i>\$maxDepth</i>	only parse XML to the provided depth (default 20)

Exceptions

<i>XmlToArray-Exception</i>	
---	--

Returns

array

4.18.3.3 `toArray ($ simpleStructure = false)`

Returns parsed XML as array structure

Parameters

bool	<i>\$simple-Structure</i>	(default false)
------	---------------------------	-----------------

Returns

array

4.20.2 Constructor & Destructor Documentation**4.20.2.1 __construct (\$ name, \$ attributes)**

Constructor for [XmlToArrayNode](#)

Parameters

string	<i>\$name</i>	
array bool	<i>\$attributes</i>	

Returns**4.20.3 Member Function Documentation****4.20.3.1 addChild (XmlToArrayNode \$ XmlToArrayNode)**

Add a child to collection

Parameters

XmlToArrayNode	<i>\$XmlToArrayNode</i>	
--------------------------------	-------------------------	--

Returns

void

4.20.3.2 `getData ()`

Getter for data, returns an array

Returns

array

4.20.3.3 `getName ()`

Getter for name, returns the name

Returns

string

4.20.3.4 `getParentXmlNodeToArrayNode ()`

Getter for parent node

Returns

[XmlNodeToArrayNode](#)

4.20.3.5 `hasChildren ()`

Does it have any children

Returns

int count of children

4.20.3.6 `hasParentXmlNodeToArrayNode ()`

Does it have a node

Returns

bool

4.20.3.7 `isOpen ()`

Is it open, returns `_open`

Returns

bool

4.20.3.8 render (*\$simpleStructure*)

Renders nodes as array

Parameters

bool	<i>\$simple-Structure</i>	pass true to get an array without and fields
------	---------------------------	--

Returns

array

4.20.3.9 setClosed ()

Set it to closed

Returns

void

4.20.3.10 setData (*\$data*)

Setter for variable data

Parameters

string	<i>\$data</i>	
--------	---------------	--

Returns

void

4.20.3.11 setParentXmlNodeToArrayNode (XmlNode *\$XmlNode*)

Setter for parent node

Parameters

XmlNode	<i>\$XmlNode</i>	
-------------------------	------------------	--

Returns

void

The documentation for this class was generated from the following file:
